SMARTBAND MODEL	Whoop 5 MG
CARRIER / METHOD	Standard International Mail
TRACKING NUMBER	Pending

Your smartband lens is here too!

Hi Heath,

As requested, we are including this **second optical lens** for your smartband — packed in the same shipment as your main order lens.

Your optical lens has been custom-manufactured and carefully packed. Please follow the instructions and curing times below to ensure maximum adhesion and optimal sensor performance.

STEP-BY-STEP INSTALLATION GUIDE

- 1 Surface cleaning:** Thoroughly clean the optical sensor on the back of your smartband using isopropyl alcohol or an alcohol wipe. Ensure it is 100% dry, clean, and free from oils or dust.
- 2 Alignment:** Carefully remove the protective film from the adhesive side of the Sensor TattooFix® lens and align it centrally over the optical sensor.
- 3 Application:** Press the lens firmly against the sensor for 30 to 45 seconds using uniform pressure to eliminate micro air bubbles and activate the adhesive bond.

ADHESIVE CURING SCHEDULE (CRUCIAL FOR MAXIMUM LONGEVITY)

4 Hours REGULAR USE Safe for casual daily wear.	48 Hours WORKOUTS / SWEAT Required before heavy sweat or exercise.	72 Hours WATER EXPOSURE Full cure required for swimming or showers.
--	---	--

IMPORTANT USAGE NOTES

- Charging:** Your Sensor TattooFix® lens is fully compatible with your Whoop battery pack — you do not need to remove the lens when charging.
- Following the curing timeline above guarantees long-lasting adhesion even during high-intensity training.

If you have any questions or need assistance, feel free to contact us anytime at support@sensortattoofix.com.

Best regards,
Fabio Nardoni & The Sensor TattooFix® Team
